Bisphenol A (BPA)

Bisphenol A (4,4'-isopropylidenediphenol, EG-Nr. 201-245-8, CAS-Nr. 80-05-7) was included in the REACH SVHC list on January 12th, 2017 and is therefore not a new REACH SVHC to be declared from a concentration of more than 0.1 mass percent.

In July 2016, the Bisphenol A (BPA) limit value for certain applications was reduced from 0.1 mass percent to 0.02 mass percent.

The discussion of reducing the limit value here to **0.02 mass percent** for further applications continues and therefore leads to this additional question:

We, the signees confirm to you that...

...our products and their packaging supplied to these customers DO NOT contain Bisphenol A (BPA) with more than 0.02 mass percent.

...the products and their packaging below contain Bisphenol A (BPA) with more than 0.02% mass percent.

Product/Article	Product-/Article-No.	Typical concentration

Alternatively, you can send us your list of products with more than 0.02 mass percent of Bisphenol A (BPA) by E-Mail!
